

STONE MOUNTAIN PROPAGATION PROJECT

SPECIALIZING IN NATIVE PLANTS FOR
RESTORATION AND POLLINATORS

Order Plants for your Project

We offer wholesale pricing on a selection of native plants for community organizations, schools, and public entities. Generally we provide plants for conservation projects such as restoration sites, education and community gardens and plant sales. If you are in need of Piedmont natives for your project, please send an inquiry to SMPP_Admin@gnps.org. Our nursery manager will provide a current availability list and ordering instructions.

Pollinator Plants

We offer a seasonal mix of the best pollinator plants based on floral structure and bloom times. See what we currently have to offer here:

STONE MOUNTAIN PROPAGATION PROJECT

A UNIQUE COMMUNITY PROPAGATION CENTER

Stone Mountain Propagation Project (SMPP) is a Georgia Native Plant Society propagation site and nursery located inside Stone Mountain Park. The focus at SMPP is to produce plants for habitat restoration as well as a variety of native pollinator plants that are appropriate to the Georgia Piedmont. This is a largely volunteer effort; each year, more than fifty volunteers give nearly 1,500 hours of time to support this operation. Volunteers have the opportunity to learn about native plants, propagation techniques and land restoration while enjoying the company of like-minded peers and performing a priceless community service.

If you are interested in joining the SMPP mailing list, contact SMPP_Admin@gnps.org. Scan the QR code for the volunteer schedule.
